SUMMARY

Senior Full Stack Engineer (Vue.js, TypeScript, Laravel/PHP) with almost 5 years shipping production web apps for banking, fintech and a US-based API company, 2 of those years fully remote. Currently the sole frontend engineer on internal platforms at Provincia NET (Banco Provincia group), where I also designed hu-flow, a workflow of 12 Claude Code agents that takes a user story to a branch ready to merge, with a human approving every checkpoint. On the side, I build applied AI and Python systems: an on-premise RAG document assistant and an algorithmic trading platform with 2,000+ tests.

SKILLS

Frontend: Vue 3 (Composition API, Pinia, Vuex, Vue Router), Vue 2, Vite, TypeScript, JavaScript, Tailwind CSS, React, Next.js, WebSockets

Backend: Laravel, PHP, Node.js, Python, REST APIs

Applied AI: Claude Code agents (MCP, hooks, skills), RAG, embeddings, vector databases (ChromaDB), function calling, Ollama

Testing: Vitest, PHPUnit

Data & DevOps: MySQL, PostgreSQL, Docker, GitLab, GitHub, GitHub Actions, Azure DevOps, Linux

EXPERIENCE

Senior Full Stack Engineer — Provincia NET Dec 2024 – Present

Banking technology company in the Banco Provincia group · Buenos Aires, Argentina · Hybrid

Internal platforms: agency self-service, board meetings and document intake, moving from legacy monoliths to decoupled Vue frontends and Laravel APIs behind an API gateway. Sole frontend engineer on teams of 3–8 developers, reporting to the Product Owner.

- Built the Vue 3 frontend of the self-service portal from scratch; 350+ agency users use it to track balances, earnings and cash flow, manage user access and configure their agency.
- Created the company's first frontend base project (layout, routing, auth and token handling, API layer, shared components), which new frontends and legacy migrations now build on.
- Rebuilt two legacy systems (the document intake system and the board-meeting platform used by senior leadership), replacing plain PHP pages with Vue 3 frontends on Laravel APIs.
- For the migration, designed the frontend–API contract and built working prototypes on mock data, so the team could validate flows before the backend was ready.
- Dockerized legacy and new projects and moved them to GitLab, with encrypted per-environment variables.
- Designed and built hu-flow, a workflow of 12 Claude Code agents that takes an Azure DevOps user story to a branch ready to merge: it reads the story and the Figma design, plans, implements, writes tests, verifies each acceptance criterion in the browser or against the API, and runs code, security and Trivy vulnerability reviews in parallel.
- Kept a human in the loop with 4 approval checkpoints and hook guardrails, and covered the workflow itself with 679 automated tests. Used on 4 user stories and 5 bug fixes; it also reviews teammates' merge requests and is about to roll out to the rest of the team.
- Ran a token-cost analysis of the workflow (6,776 agent calls) and found that 64% of spend was re-sent context.

Tech: Vue 3, TypeScript, Pinia, Tailwind CSS, Laravel, MySQL, Docker, GitLab, Azure DevOps, Claude Code

Frontend Developer (Web & Mobile) — Global66 Jan 2024 – Nov 2024

Cross-border payments fintech serving millions of users across 6 Latin American markets · Buenos Aires, Argentina · Hybrid

- Built money-transfer features for PIX (Brazil's instant payment system) and euro transfers.
- Improved the onboarding flow and reworked the transfer flow to meet new product requirements.
- Built UI driven by JSON configuration stored in Firebase, with images served from AWS S3.
- Developed reusable Vue 2/3 components with TypeScript and contributed to the mobile app (NativeScript).

Tech: Vue 2/3, TypeScript, NativeScript, Tailwind CSS, Firebase, AWS S3

Full Stack Developer — Zyla Labs Feb 2022 – Dec 2023

US-based API company · Remote

Products: the Zyla API Hub (zylalabs.com), a marketplace where developers find, subscribe to and manage APIs from a single account, plus the company's own APIs. Team of 2–4 developers with no dedicated designers or QA. Owned up to 5 API products at a time end to end: UX, UI, Laravel backend and API endpoints, MySQL, jQuery/Bootstrap frontends (one in Vue.js), testing and releases.

- Led the Zyla API Hub end to end, frontend and backend; the design I delivered is still live.
- Redesigned the frontend of Metals-API, one of the company's highest-revenue products.
- Rebuilt about 70% of Woord, a text-to-speech product, frontend and backend.
- Shipped features for Klazify, Commodities-API, ipXapi, Mailet and SendYellow.
- Built a Python OCR flow with Tesseract for Plaraphy, a paraphrasing tool, to extract text from images.
- Integrated Stripe payments and Algolia search, and deployed apps on Heroku.

Tech: Laravel, PHP, Python, Tesseract OCR, MySQL, REST APIs, jQuery, Bootstrap, Vue.js, Stripe, Algolia, Heroku

Frontend Developer (Contract) — Freelance Oct 2022 – Jan 2023

Vehicle inspection station (VTV) · Buenos Aires Province, Argentina · Remote

- Built a real-time React dashboard that streamed brake-tester readings to a tablet over WebSockets.

Tech: React, Bootstrap, WebSockets

Full Stack Developer Trainee — NEORIS Oct 2021 – Dec 2021

Buenos Aires, Argentina

- Technical training followed by a team web project.

Tech: Laravel, PHP, MySQL, Angular

PROJECTS

On-premise AI document assistant (RAG) — Client pilot

Built for a plastics injection-molding manufacturer · About 80% complete, on hold on the client's side

- Runs on the client's own server and answers questions over hundreds of their internal documents.
- RAG pipeline with ChromaDB and a Next.js chat interface; local inference with Ollama (Qwen2.5), CPU only.
- PII masking before any optional call to an external model; function calling to pandas for questions that need figures.

Tech: Python, Ollama, ChromaDB, Next.js, pandas

Algorithmic trading platform — Personal project

Running on exchange demo accounts

- Signal engine, order execution, risk limits, dashboard and multi-account support.
- 2,000+ automated tests behind CI gates.
- Walk-forward and permutation tests, which caught a labeling bug.
- Runs on Linux as systemd services, with encrypted credentials and MFA.

Tech: Python, Linux, systemd, GitHub Actions

EDUCATION & TRAINING

Universidad Tecnológica Nacional (UTN) — Industrial Engineering (coursework, no degree) 2017 – 2022

Full Stack Web Development (Laravel, PHP, MySQL) — UTN 2021

Full Stack Web Development (Angular, React, Node.js) — UTN FRBA e-Learning 2021

Vue.js Developer — Coderhouse

Platzi courses — Clean Code, OOP and Data Structures in JavaScript; Next.js; React 2023

LANGUAGES

Spanish: native. **English:** professional working proficiency; all code and technical documentation written in English.
